

Future Interns Blockchain & Crypto Internship

 **Track Code: FUTURE_BC_01**

Task 1 Submission

Crypto Exchange Account Creation – BingX

 **Intern Name: Avichal Avneel Nath**

 **CIN ID: FIT/JUL25/BC726**

 **Submission Date: 09/07/2025**

This document contains the summary and evidence of Task 1 completion, including exchange registration, KYC verification, platform exploration, and key features analysis of the BingX crypto exchange.

Task 1 Summary – BingX Exchange Account Setup and Exploration

As part of Task 1 for the Future Interns Blockchain & Crypto track, I successfully created and verified my account on **BingX**, a globally trusted cryptocurrency exchange. The onboarding process included **KYC verification** using a government-issued ID, ensuring compliance with regulatory standards and secure platform access.

Upon verification, I explored BingX's comprehensive dashboard, which offers a clean and trader-friendly interface. I reviewed a wide range of **tradeable assets**, analyzing their **current market valuations**, liquidity, volatility, and price action behavior — essential elements for any active trader.

One standout feature was the **Spot Trading** interface. It provided real-time access to trending pairs, market depth, and charting tools, making it seamless to identify **high-volume assets**, track **support/resistance zones**, and execute quick entries on **breakout setups**.

I also explored:

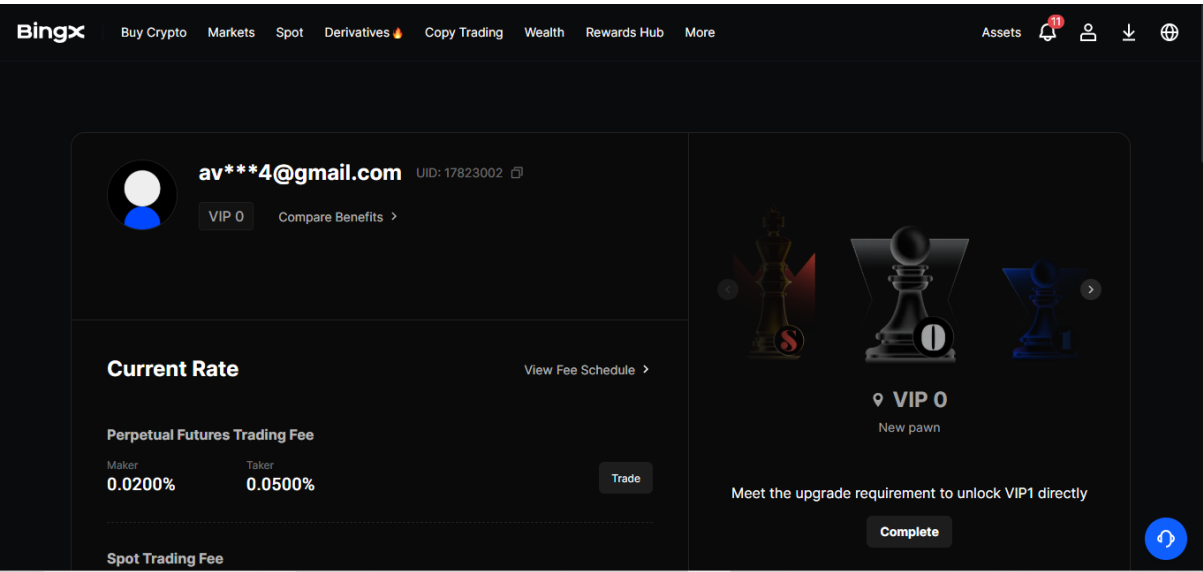

- **P2P Trading:** Offers multiple fiat on-ramp options, making fund transfers highly flexible with various local payment gateways.
- **Dual Investment:** A structured product that aligns with swing trading strategies — allowing me to set predefined **buy-low/sell-high levels** based on market ranges.
- **Copy Trading and Futures Markets:** Great tools for leveraging broader strategies, from scalping to medium-term holds, with risk metrics and ROI insights.

As a trader, I appreciated BingX's focus on **technical insights**, **order book transparency**, and access to real-time data — all of which are key to executing efficient trades and managing risk dynamically.

Verified account- Post KYC account status:

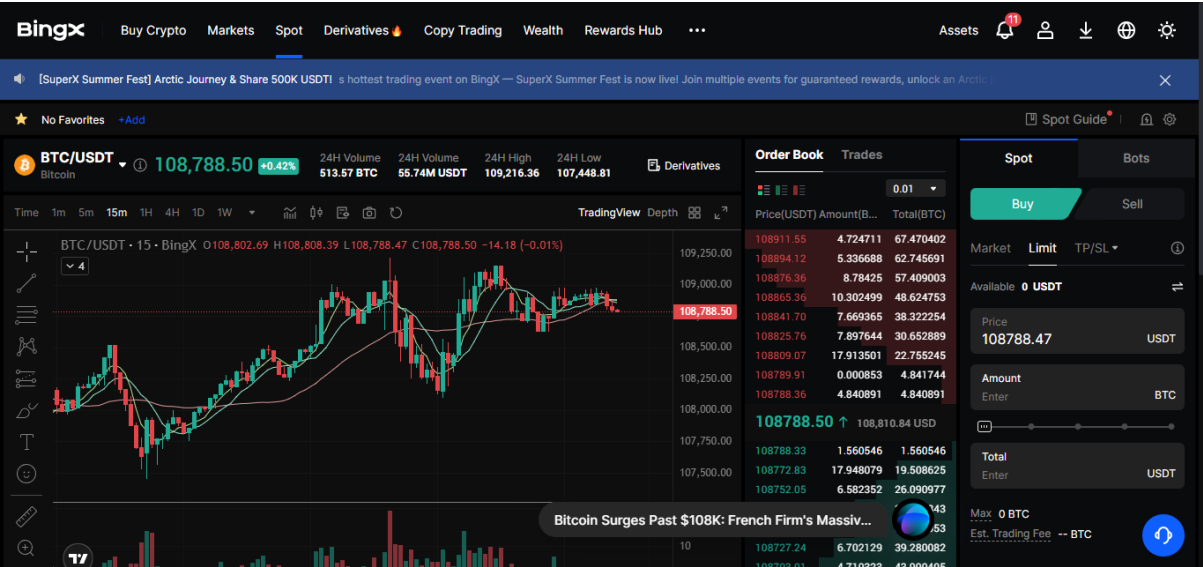

The screenshot displays the 'Identity Verification' section of the Bingx app. At the top, there's a title 'Identity Verification' with a help icon. Below it, a message states: 'Complete identity verification to unlock more features. If your daily or monthly depositing and trading.' The main heading is 'Individual Verification'. A card titled 'Advanced Verification' shows a 'Verified' status and a link to 'Identity Transfer'. Under 'Account Privileges', a list shows limits: 'Daily deposit limit' (Unlimited), 'Monthly deposit limit' (Unlimited), 'Daily withdrawal limit' (5,000,000 USDT), and 'Trade' and 'Fiat Currency' both marked as verified with green checkmarks. The 'Verification Requirement' section lists 'ID photos and face recognition'. A large button at the bottom says 'View Details'. The bottom navigation bar includes links like 'Buy Crypto', 'Markets', 'Spot', etc., and the user's profile.

Dashboard:

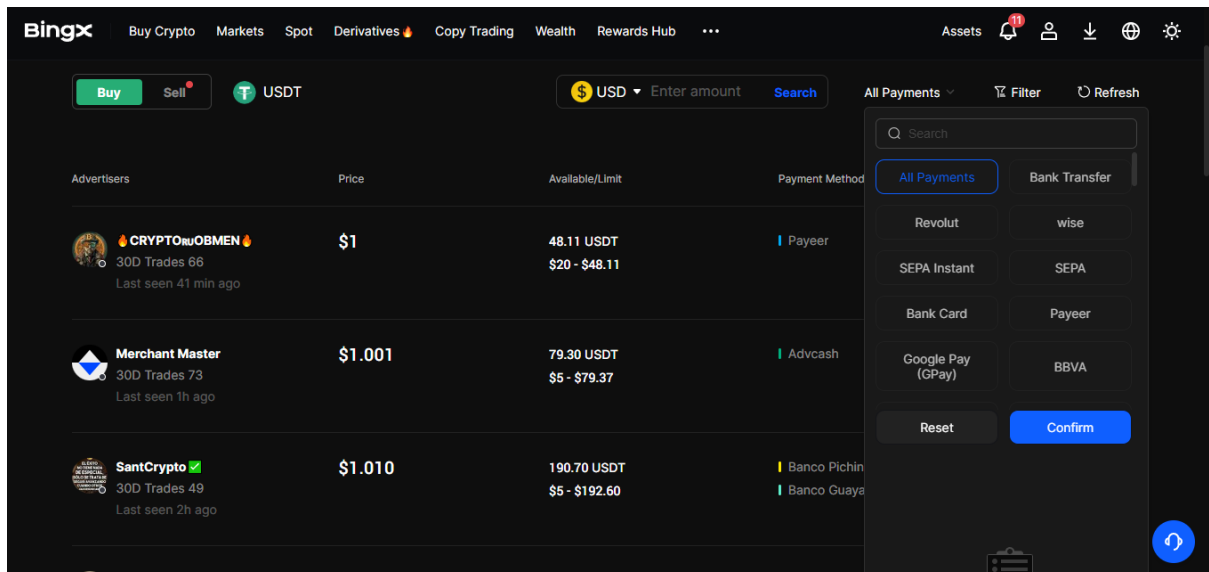

Features Explored

1) Spot Trading- most trending crptos

2. Multiple payment options

3. Dual Investment feature- buy low sell high
